

This section of the game manual is a basic overview of the user interface, gameplay, and standard terminology within the game. NARUTOARENA is a turn based strategy game where your team of three ninjas is pitted against another player's team of three ninjas with the goal of reducing your opposition to 0 health points and winning the match.

>> How to put images in the game

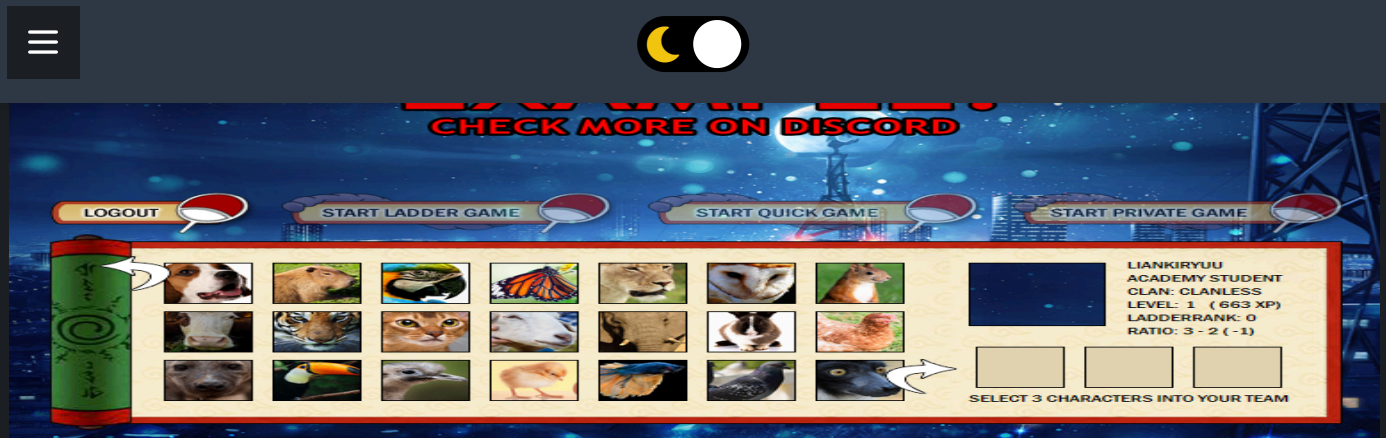

1: Join our Discord Server. [\[CLICK HERE\]](#)

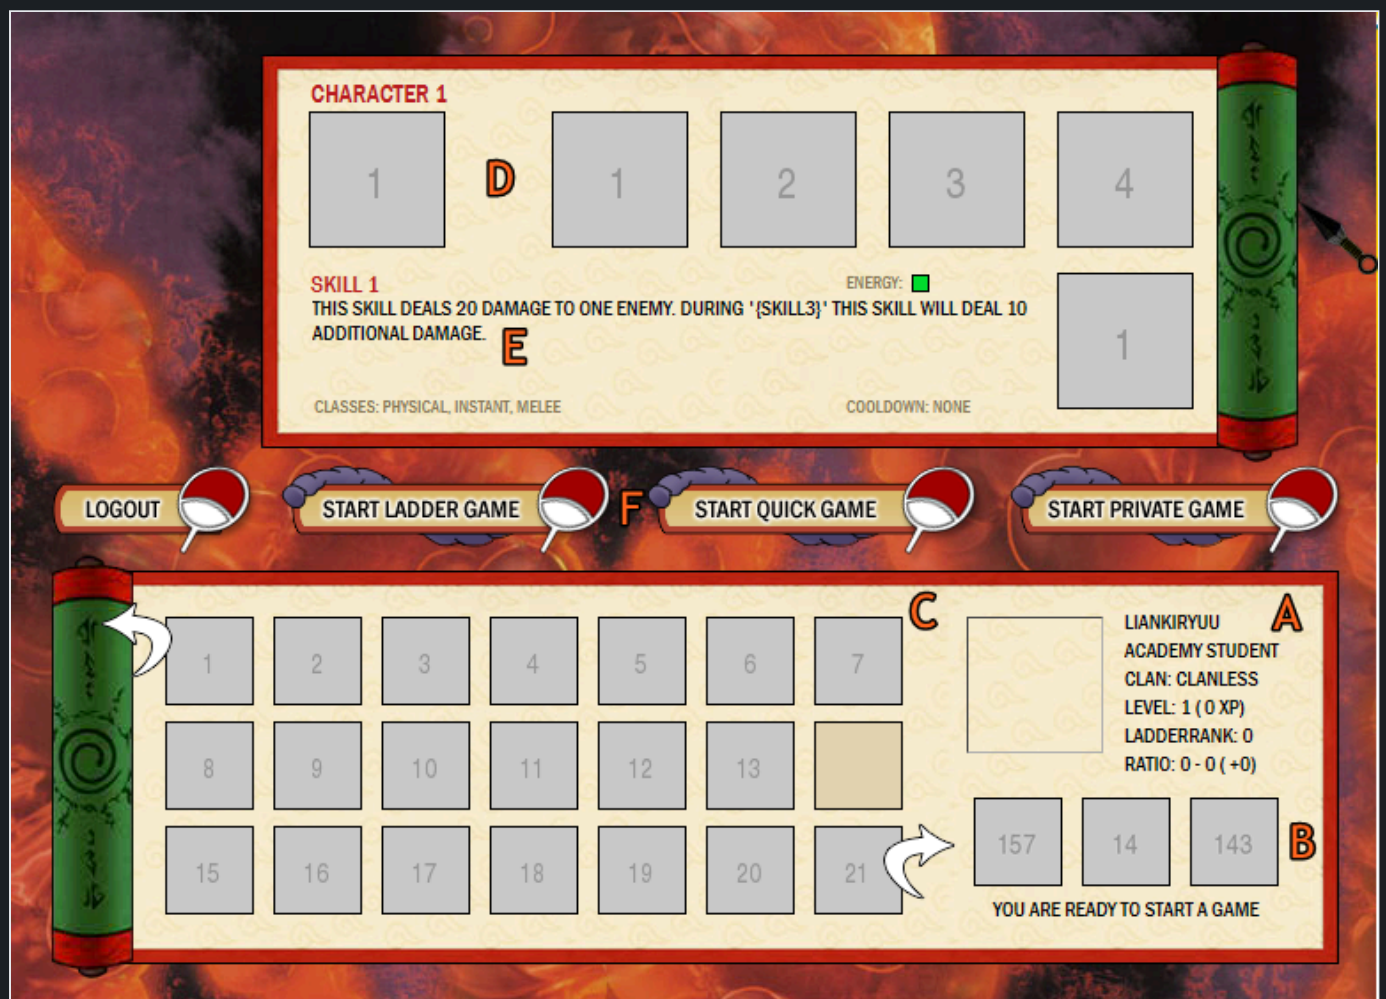

2: Go to the [#theme](#) channel on it.

3: While logged in, activate one of the themes made by the community.

4: Done! You can play the game full of images once again!

>> Selection Screen

The first thing you will see when beginning a game of NARUTOARENA is the screen above (without the big blue letters). This is the Character Selection screen and what ever is and does is explained below.

A: This section displays your player information. It shows your avatar, username, ninja rank, ladder level and experience, ladder rank, win-loss record, and win-loss streak, all in that order.

B: This section has three boxes for you to drag and drop the ninjas you wish to use in your team. Only when you have selected three ninjas may you begin a match.

C: This is the character section. Each page has 21 characters on it and you use the white arrows to scroll through the pages. Some characters may appear grayed-out and you will not be able to drag these characters into your team. These characters are mission characters and you must complete their mission before you may use them.

E: By clicking on a skill icon of a character in section 'D' this section will display the information about that skill. The upper left red text is the name of the skill. The upper right is the **energy** cost of the skill. The center is the description of the skill, essentially saying what the skill does. The bottom left lists the classes of that skill. The bottom right displays that skill's cooldown.

F: The three buttons at the middle will begin a match with another opponent. There are three different types of games you may play. A ladder game is played against a random opponent near you on the ladder. This game type is the only way to increase your standing within the ladder. A quick game is played against a random opponent. This game does not count towards your ladder stats but does towards your missions. A private game works just like a quick game except that you must specify the particular opponent you wish to play against and your opponent must do the same.

>> In-Game Screen

Next will be the in-game UI (again, the yellow letters do not exist on the real UI) and the basics of how to play.

A: This section displays you and your opponent's avatars, the 'press when ready' button which is how you end your turn (this will say 'opponent's turn' when it is not your turn), a red and white bar which is your turn timer, and your **energy** pool. There are four types of **energy** in NARUTOARENA, Taijutsu (green), Bloodline (red), Ninjutsu (blue), and Genjutsu (white). The 'T' is your current total **energy** in your pool. With the exception of the first player to take a turn (they only receive one **energy**) you will receive a number of random **energy** equal to how many of your ninjas were alive at the end of your last turn.

B: This section displays your team and the current health of each ninja in it. Skills affecting these characters will also be shown here by small icons next to the character's icon. By scrolling your cursor over that icon a description of what the skill is doing will appear.

sufficient **energy** of the appropriate types to pay their costs. Any skill that cannot be used that turn for any reason is grayed-out. By clicking on a skill, viable targets for that skill with glow yellow and you must then click on one of these viable targets for that skill to be used. When a skill has been selected for a character that turn, its icon will display in the gray '?' box. To deselect a skill simply double click its icon in the gray '?' box.

E: This section is exactly like section 'E' of the Character Selection screen.

F: This section is where you can chooses to surrender a match, open a chat window with your opponent, or adjust the sound settings.

>> **Energy** Types

As mentioned above **energy** is used to perform skills. Every skill uses a different set of **energy**. There are 4 types of **energy**:

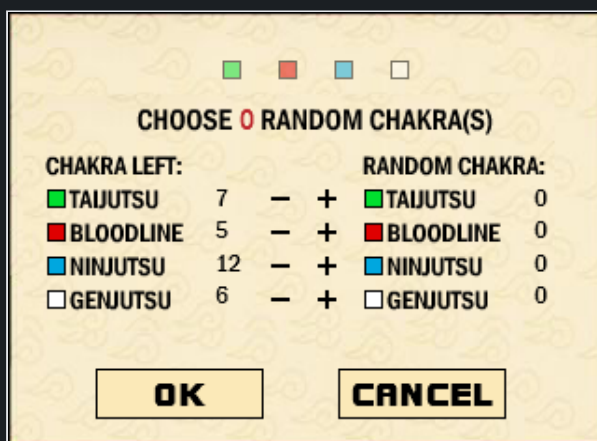

- ☐ Bloodline
- ☐ Ninjutsu
- ☐ Taijutsu
- ☐ Genjutsu

The chance to get a certain **energy** is 25% for each, as there are four types. This means that it is random, and that you can also get multiple **energy**s of one type. Next to these 4 types, some skills require random **energy**.

- ☐ This kind of **energy** can be filled in by any of the types above.

>> End of Your Turn

Once you have decided what skills your team will use and on whom it is time to end your turn. Do this by clicking on the 'Press When Ready' button in section 'A'. This will bring you to the Skill Queue.

This is where you will spend specific **energy** as random **energy** by clicking the up or down buttons next to each type. It is also where you can decide the order your skills will happen in. Skills occur in order from left to right and they may be repositioned in the queue by dragging and dropping the icons. After spending any necessary random **energy** costs and ordering your skills press the O.K. button to complete your turn (note that this is still part of your turn and your turn timer will continue to run down while in this screen). If you want to reconsider or change something you chose to do press the Cancel button to exit this screen. If you run out of time before completing your turn, your characters will not use any skills that turn.

>> Common Terminology in NARUTOARENA:

This section is laid out so that you may use your browser's find (ctrl+F) function to easily locate any terms you need to find the definition of.

Common terms in a skill's description:

Piercing Damage: A type of damage that ignores damage reduction.

Affliction Damage: A type of damage that ignores damage reduction and destructible defense.

Health Steal: This effect steals your opponent's health rather than just dealing damage to them. For example, if you steal 20 health from them, you will be healed by 20 health as well. Health Steal goes through damage reduction but it doesn't go through destructible defense. However, if you affect an opponent's destructible defense rather than their health itself by using a health steal effect, your character will not be healed by the same amount.

ATTENTION: Health Steal is NOT a type of damage and it's not healing either, but it can be increased by damage increase effects.

Original Damage: It's the damage a skill deals disconsidering damage increase or decrease effects.

Straight Damage Change: Still within the definition of "original damage", a straight damage change is when the damage a skill deals is changed rather than increased or decreased.

FOR EXAMPLE: "SkillX will deal 60 damage instead of 30 damage." This is NOT the same thing as "SkillX will deal 30 additional damage."

Damage Reduction: This means that any normal damage dealt to a character will be reduced by a fixed amount after all damage dealt that turn is calculated.

FOR EXAMPLE: 50 points of damage reduction from 120 damage taken from all skills will make your character take 70 damage instead. This effect is ignored by piercing and affliction damage.

Unpierceable Damage Reduction: It has the same definition as damage reduction, but piercing damage doesn't ignore unpierceable damage reduction.

Destructible Defense: This effect gives a character a pool of health (like some sort of "shield") that must first be depleted before the character will take damage. This effect is ignored by affliction damage.

Invulnerable: This means the character affected will not be a valid target for new enemy skills (by default), though they may still be affected by enemy instant skills already affecting them. If the skill doesn't specify if the character is invulnerable to harmful effects/skills, helpful effects/skills or both, this means the character is invulnerable to harmful skills.

Harmful/enemy skills: Any skill used that somehow affects (directly) a character on the opposing team.

Harmful effects: Any effect coming from a harmful/enemy skill.

Helpful/friendly skills: Any skill used that somehow affects (directly) a character on the caster's team.

ATTENTION: Any skill used by one of your characters that has a non-damage effect targeting that character or an ally is considered a helpful/friendly skill.

Helpful effects: Any effect coming from a helpful/friendly skill.

Conditional effects: A conditional effect is an effect that needs a condition to be achieved so that effect is put into work.

FOR EXAMPLE: "If this character uses a new skill, they will be stunned for 1 turn."

Non-conditional effects: A non-conditional effect (also called a direct effect) is an effect that does not need a condition to be achieved so that effect is put into work.

Stun: This means a character is unable to use a skill for the duration that the stun is in effect. If it just says "this character is stunned", then they cannot use any skill at all. However, a stun effect can also stun specific skill classes; if so, then only skills with those classes are unable to be used.

Heal: This means a certain amount of health is returned to the character, percentage or fixed. Dead characters cannot be healed (although they can still be revived). Characters cannot be healed above 100 health. Healing does not affect destructible defense.

Lifelink: Everytime a character with lifelink uses a new skill that deals direct damage, they will be healed by the same amount of damage the skill deals, ignoring damage increase and decrease effects (straight damage changes are still considered). Skills that deal two different types or amounts of damage will have the first amount considered.

Remove energy/lose energy: This means that your opponent will have a certain fixed amount of random (any available type) or specific energy removed from their energy pool. If a skill removes specific energy and your opponent does not have any of that type, then no energy is removed.

ATTENTION: A player gains new energies at the end of their turn, so they always have energy to be removed/to lose if they are being removed on the enemy turn. If a player loses energy on their own turn, they got energy removed from their current pool, before gaining any new energy.

Steal/drain energy: This works exactly like removing energy, except that the energy is instead put into your energy pool rather than removed from the game.

Counter: This effect will negate another incoming skill (or skills if the counter affects more than one skill). It will not negate a skill already affecting a character. Action skills can only be countered on the first turn. A counter type skill is generally linked with another type of effect that will affect the character whose skill was negated.

ATTENTION: If a skill is meant to counter the first skill, it ignores any skill that cannot be countered and then considers the next skill used as "the first skill" instead.

Reflect: This effect will return the effects of a skill back upon a character (the skill will specify if it's the user of the skill, a previously marked enemy or a random enemy).

ATTENTION: A skill that reflects skills back upon a random enemy needs to target the enemies at use. That means that a character you didn't affect with that skill is not an available option within the "random enemy" definition.

Remove 'xxx': Any skill that states it removes another type of effect or skill (typically by a class type) will completely remove that effect/skill from a character. Effect/skill removal is NOT considered neither a harmful or a helpful effect.

Ignore 'xxx': As the word states, a skill with this aspect will ignore some other type of effect. The ignored effect is not negated or removed, it just doesn't do anything to that character. This is NOT the same thing as the character being invulnerable; you can still be targeted by said effect even if you are ignoring it.

Copy: This type of effect will copy another skill that is used, replacing an existing skill with the new copied skill for the duration of the copy. A copied skill that replaces itself or any skill after used will replace the skills in the same spot they were on their original caster.

FOR EXAMPLE: If you copy a skill that is originally on its caster's third skill spot and that skill has a replacement version and that copied skill goes to your first skill spot, after using it, it's your third skill that will be replaced rather than the copied skill itself.

Replace: This effect replaces the spots of the skill or skills being replaced for this effect's duration.

FOR EXAMPLE: A skill that is replaced for 1 turn after used has its spot "taken" by another skill that turn.

Invisible: Your opponent will not see any icons for these skills during the time it is in effect. For some skills only the target is not known but the fact that the skill is in use is known. When an invisible skill ends, the opposing

for the effect mentioned. You can increase or decrease a character's damage, healing, destructible defense, skill cooldowns, skill costs, etc.

ATTENTION: Skills that are already on cooldown are not affected by a cooldown increase or decrease effect.

General P.S: Targeting happens before a skill's effects are applied.

You can still counter or reflect a skill that makes you ignore all helpful effects.

You can still use a skill to finish a skill that ends if the caster is affected by a new harmful skill, even if the skill you used is reflected to another character.

A skill's effects are only meant to work against enemy skills, unless the skill itself says differently.

>> Cooldown

A skill's cooldown is how many turns a skill cannot be used for after being used. For example a skill with a cooldown of 4 will not be available for use the following 4 turns after it is used.

>> Skill Classes Definition:

Classes are used to further describe a skill beyond its description. Generally Skill Classes are only important in determining whether one skill will affect another in the course of a game.

This section is laid out so that you may use your browser's find (ctrl+F) function to easily locate any terms you need to find the definition of.

Skill Type (also called as "Main Class"):

Physical: The skill deals damage to the enemy somehow and it is matter creating the result of the skill.

Energy: The skill deals damage to the enemy somehow and it is some form of **energy** creating the result of the skill.

Mental: The skill deals damage to the enemy somehow and is some form of thought or other metaphysical **energy** creating the result of the skill.

Affliction: The skill deals affliction type of damage somehow.

Strategic: The skill doesn't deal damage to the enemy at all.

Achievement: The skill cannot be manually used and the character doesn't have usual access to it. Once the character achieves a certain goal on the match (the goal will be written in the achievement skill), the skill is instantly activated on them. Achievement skills are by nature re-applied if the goal is achieved more than once in the match. Achievement skills can be normally removed just like any other skill, as well as what every normal skill have as a way to achieve the achievement.

Persistence Type:

Instant: Instant skills are skills that do their work instantly. An instant skill that lasts more than 1 turn is not stopped by its caster being stunned or by its target becoming invulnerable.

Action: Action skills are skills that last multiple turns and require the attention of the caster each turn anew. If the caster loses contact with the target, by a stun or an invulnerability, the action will have no effect that turn. But since the skill is done each turn anew, the skill will continue once the caster has contact with its target again. A non-damage action effect is not written like a damage effect is (for X turns), it has the "ends this turn" or "for 1 turn" text applied on its target each turn for its duration.

on them or a control skill they used, the skill will start working like an instant skill.

Specials:

Affliction*: The part of the skill's description followed by a * is what makes that skill an affliction skill in addition to its main class.

Instant*: The part of the skill's description followed by a * is not stopped by the caster being stunned or the target becoming invulnerable.
